

SLF300 Slide and Stack Glass Panel System

The SLF300 Slide and Stack Glass Panel System features a comprehensive combination of aluminium top track that facilitates flexibility in design layout. This system is able to carry frameless glass door panels of up to 4000mm in height and width of up to 1100mm.

With its robust carriage roller made up of stainless steel body with 8 ball bearing wheels, it allows better weight distribution and stability, thereby eliminating excessive swaying and reducing the track to wheel friction thus translating smooth and effortless sliding motion.

SLF300 comprises sliding door intermediate panels and swing door pivot panel. In addition, you have a choice of both aluminium clip-on rail covers or stainless steel rail covers of both polish and satin finish.
